Requirements

Runtime object dictionary v1.0
Done

Settle run boundaries for model, agent, resource, cost, output and evaluation.

Renderer adapter prototype
In Progress

Translate kernel nodes and domain presets into preview-ready output.

Evaluation pipeline
Planned

Track scorecards, review comments and result confidence.

Runtime Activity

Project overview preview
Running

Rendered from kernel page JSON through JsonRender adapter.

Token/theme merge
Success

Merged foundation.dark with openbit.dark for preview resolution.

Catalog validation
Success

Foundation assets loaded and expanded successfully.

Result Evaluation

`packages/app-openbit/examples/project-overview.page.json`

`packages/app-openbit/examples/project-overview.data.json`

`packages/ui-domain-openbit/presets/*.json`

`packages/ui-foundation/catalog/*.json`

Current visual draft is generated from the same JSON-first structure used by the architecture docs.

Generated from page.project-overview using foundation.dark + openbit.dark.
