Component Gallery

This board shows the product-agnostic foundation catalog and the OpenBit semantic preset layer separately. Foundation defines reusable building blocks. Domain presets describe business-level composition.

Foundation Catalog

content.badge

Compact semantic badge.

Default Active

source: packages/ui-foundation/catalog/content.badge.json

content.heading

Semantic title text.

Heading Example

source: packages/ui-foundation/catalog/content.heading.json

content.label

Compact label text for metadata.

LABEL / METADATA

source: packages/ui-foundation/catalog/content.label.json

content.text

Body copy with tone and line constraints.

Body text stays descriptive and neutral. Tone comes from semantic props, not one-off styling.

source: packages/ui-foundation/catalog/content.text.json

data.list-item

Semantic list row for tasks, runs, and participants.

Renderer adapter prototype In Progress

Translate kernel nodes and domain presets into preview-ready output.

data.metric

Small metric card for summary numbers.

74

Tasks

11 in progress

source: packages/ui-foundation/catalog/data.metric.json

source: packages/ui-foundation/catalog/data.list-item.json

layout.grid

Wrapping layout for cards and dense summary content.

- Card A
- Card B
- Card C

source: packages/ui-foundation/catalog/layout.grid.json

layout.stack

Generic one-dimensional layout container.

- Column / Row abstraction
- Gap, padding, alignment
- Primary layout primitive

source: packages/ui-foundation/catalog/layout.stack.json

surface.card

Surface container for grouped content.

Card Surface surface.card

Reusable content container with neutral elevation and border contract.

source: packages/ui-foundation/catalog/surface.card.json

OpenBit Presets

openbit.page-header

Project hero summary for an OpenBit project page.

- Preset root: surface.card
- Semantic composition layer over foundation contracts.

source: packages/ui-domain-openbit/presets/openbit.page-header.json

openbit.participant-panel

Project participant list.

- Preset root: surface.card
- Semantic composition layer over foundation contracts.

source: packages/ui-domain-openbit/presets/openbit.participant-panel.json

openbit.requirement-list

Requirement status list.

Preset root: surface.card

Semantic composition layer over foundation contracts.

source: packages/ui-domain-openbit/presets/openbit.requirement-list.json

openbit.runtime-activity

Recent run activity list.

Preset root: surface.card

Semantic composition layer over foundation contracts.

source: packages/ui-domain-openbit/presets/openbit.runtime-activity.json

openbit.summary-grid

Metric summary grid for counts and cost.

Preset root: layout.grid

Semantic composition layer over foundation contracts.

source: packages/ui-domain-openbit/presets/openbit.summary-grid.json
