Requirements

Runtime object dictionary v1.0
Done

Settle run boundaries for model, agent, resource, cost, output and evaluation.

Renderer adapter prototype
In Progress

Translate kernel nodes and domain presets into JsonRender specs.

Evaluation pipeline
Planned

Track scorecards, review comments and result confidence.

Runtime Activity

Project overview preview
Running

Rendered from kernel page JSON through JsonRender adapter.

Token/theme merge
Success

Merged foundation.dark with openbit.dark for preview resolution.

Catalog validation
Success

Foundation assets loaded and expanded successfully.

`packages/app-openbit/examples/project-overview.page.json`

`packages/app-openbit/examples/project-overview.data.json`

`packages/ui-domain-openbit/presets/*.json`

`packages/ui-foundation/catalog/*.json`

Current visual draft is generated from the same JSON-first structure used by the architecture docs.

Generated from page.project-overview using foundation.dark + openbit.dark.
